Laporan praktikum minggu ke -5

Pada praktikum kali ini praktikan belajar bagaimana cara membuat Controller dan page view yang masing-masing terdiri dari 3 halaman controller dan 3 halaman page view dengan menggunakan framework dengan bantuan codignter 4. Dan praktikan juga membuat suatu database sql dengan menggunakan bantuan xampp dengan mengaktifkan php dan msql di xampp kemudian mengakses "localhost/phpmyadmin" setelah itu memanggil data yang ada di database dengan menggunakan bantuan codeignter 4. Dan menampilkan datanya

Bukti pengerjaan dan souurcode

Praktikum

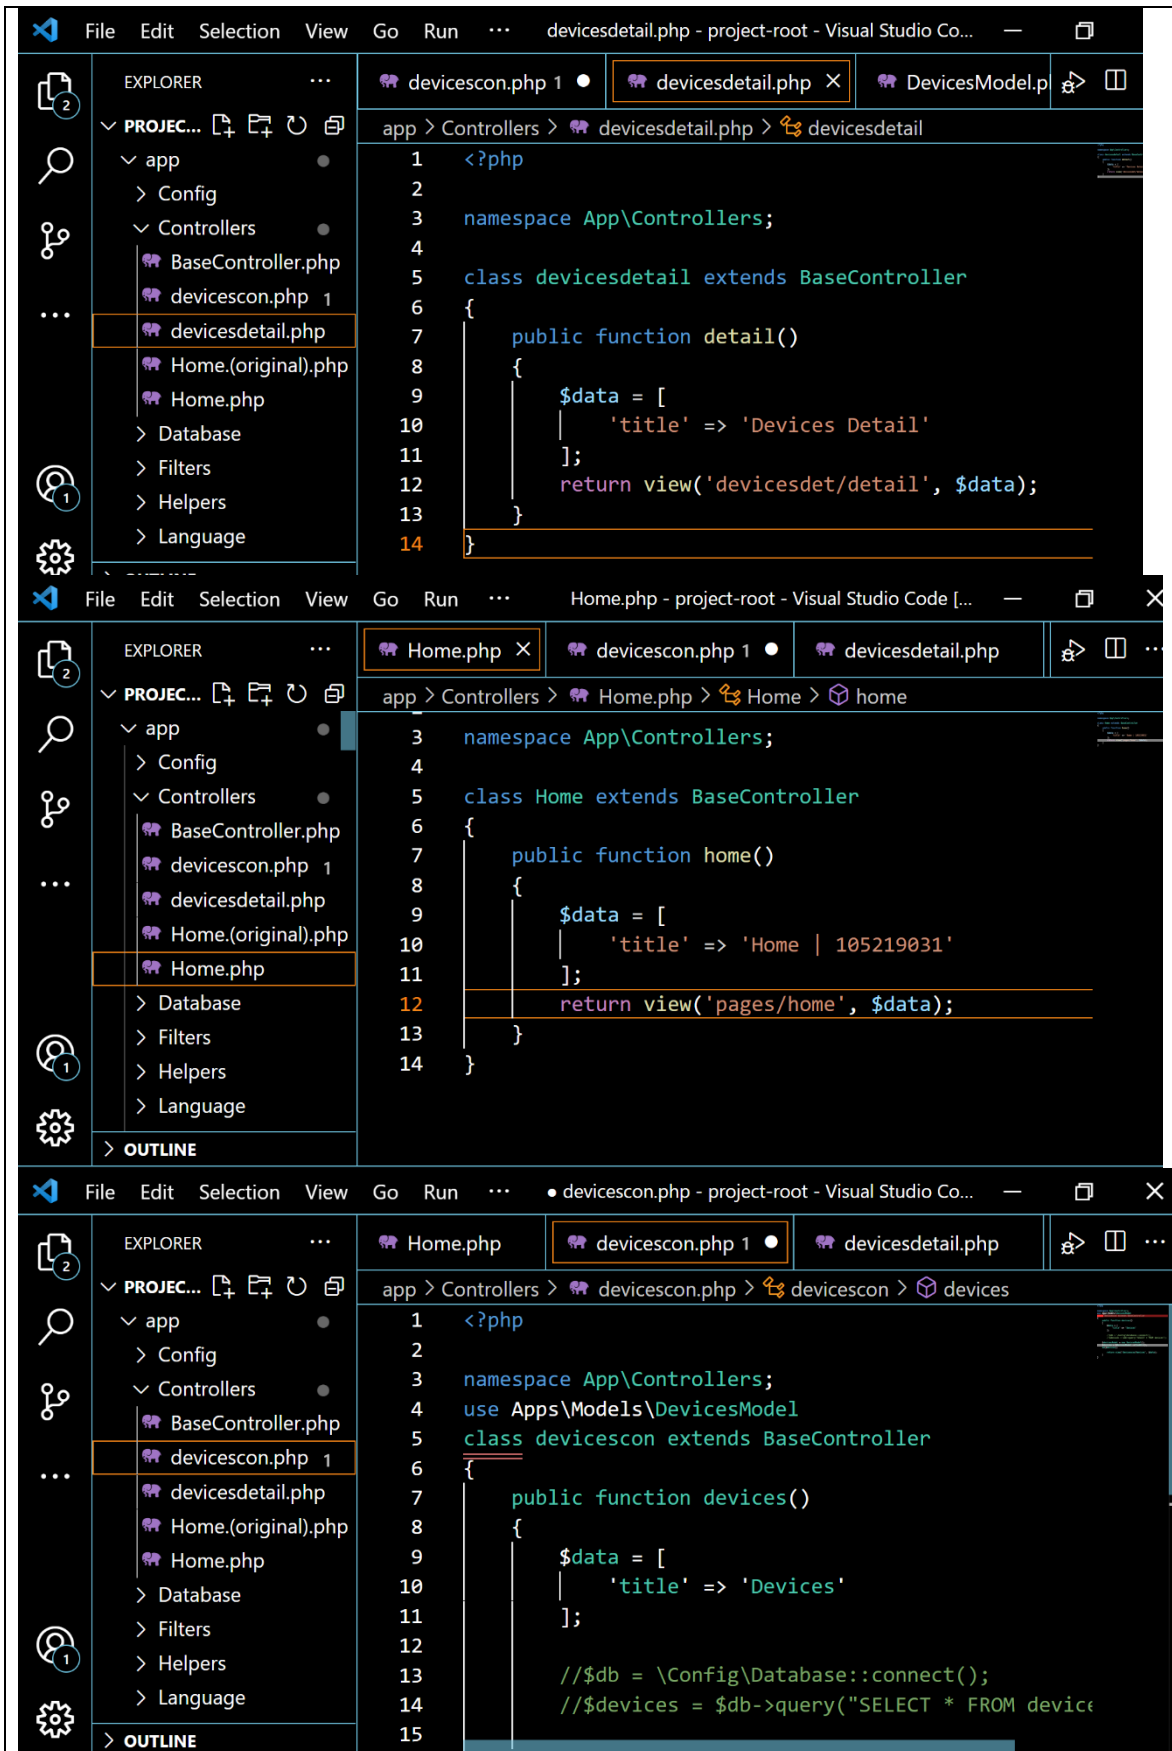

Web ini di buat untuk memenuhi tugas praktikum minggu ke 5

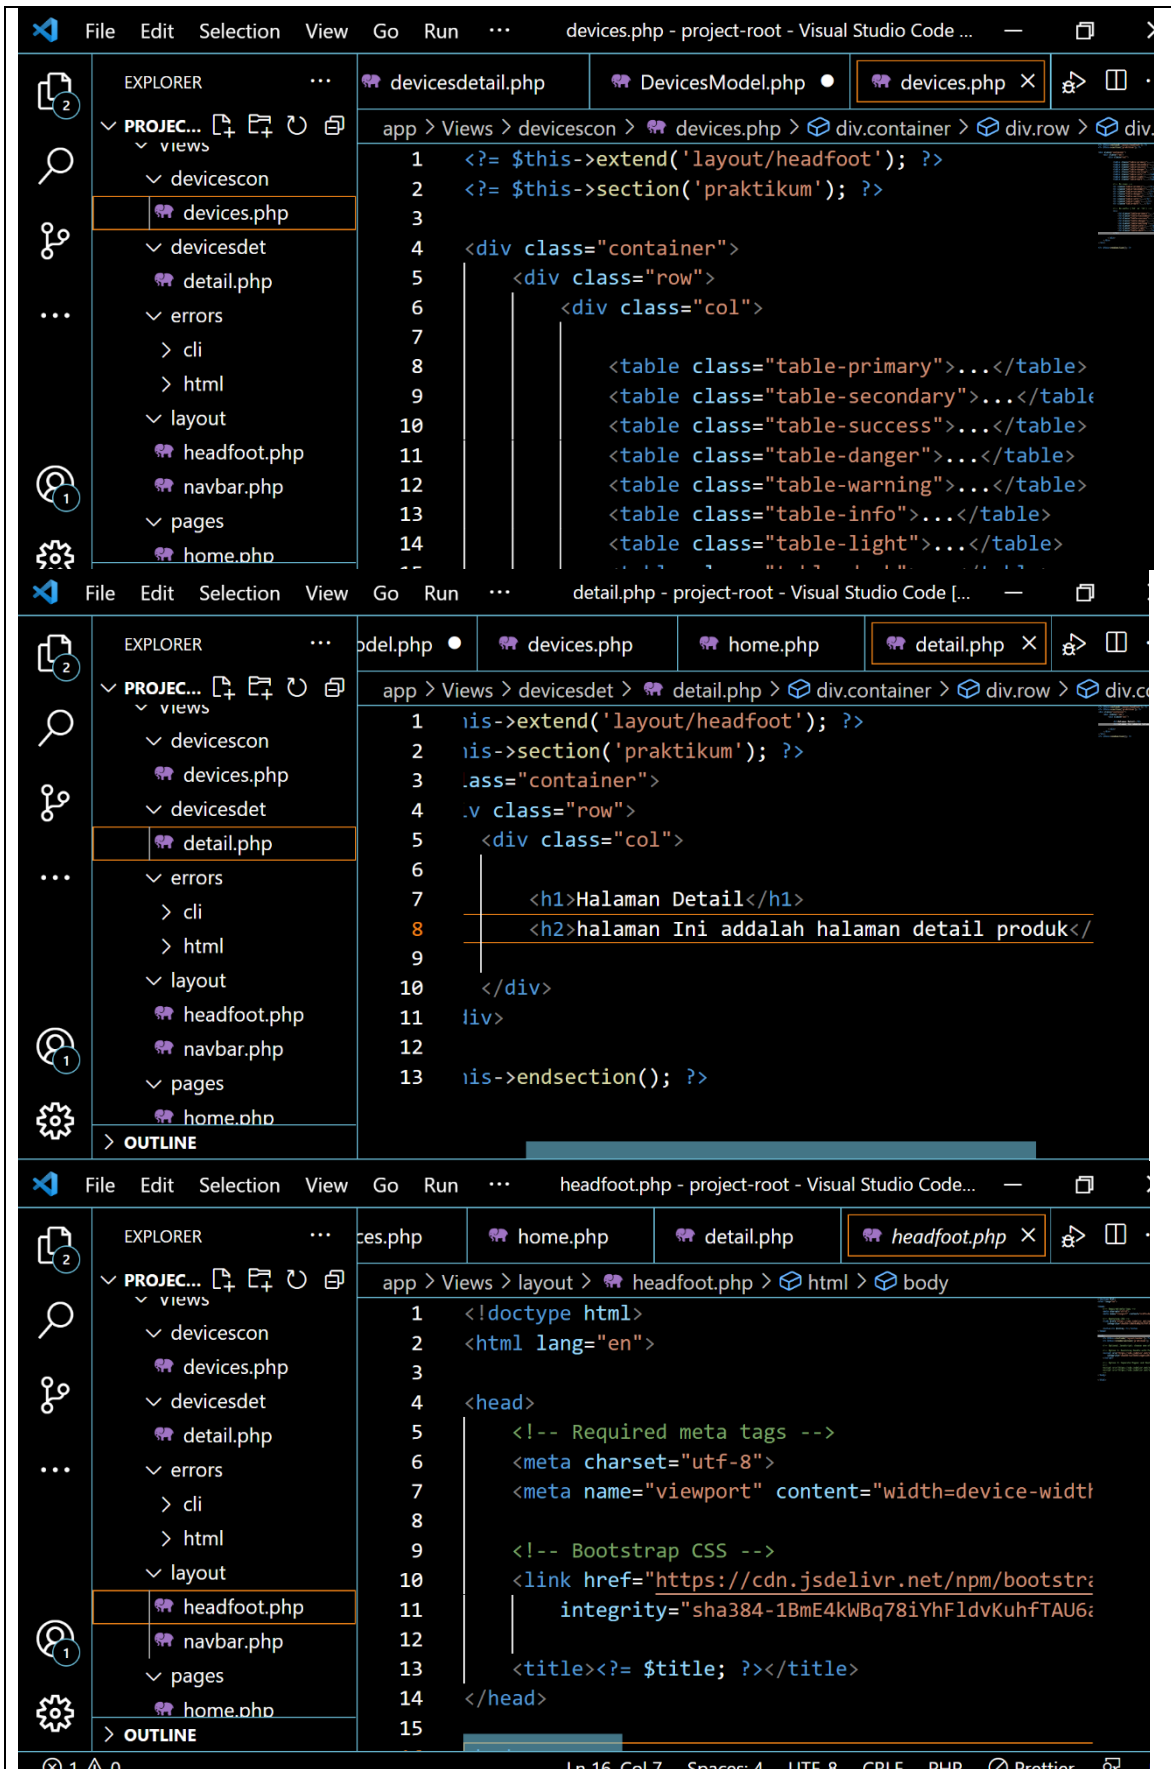

▲ \$devices CodeIgniter\Database\MySQLi\Result (8)

Properties (8)	Available methods (23)
▼ public getFieldCount(): int	Gets the number of fields in the result set.
▼ public getFieldNames(): array	Generates an array of column names in the result set.
▼ public getFieldData(): array	Generates an array of objects representing field meta-data.
▼ public freeResult(): void	Frees the current result.
▼ public dataSeek(int \$n): mixed	Moves the internal pointer to the desired offset. This is called internally before...
▼ public getNumRows(): int	Returns the number of rows in the resultID (i.e., mysqli_result object)
▼ public __construct(\$connID, \$resultID)	Constructor
▼ public getResult(string \$type = 'object'): array	Retrieve the results of the query. Typically an array of individual data rows, w...
▼ public getCustomResultObject(string \$className): mixed	Returns the results as an array of custom objects.
▼ public getResultArray(): array	Returns the results as an array of arrays.
▼ public getResultObject(): array	Returns the results as an array of objects.
▼ public getRow(\$n, string \$type = 'object'): mixed	Wrapper object to return a row as either an array, an object, or a custom class.
▼ public getCustomRowObject(int \$n, string \$className): mixed	Returns a row as a custom class instance.
▼ public getRowArray(int \$n): mixed	Returns a single row from the results as an array.
▼ public getRowObject(int \$n): mixed	Returns a single row from the results as an object.
▼ public setRow(\$key, \$value = null): mixed	Assigns an item into a particular column slot.
▼ public getFirstRow(string \$type = 'object'): mixed	Returns the "first" row of the current results.
▼ public getLastRow(string \$type = 'object'): mixed	Returns the "last" row of the current results.
